| Polish  | Native.   |

## Interests

- mobile architecture,
- leading, coaching & mentoring techniques,
- libraries development,
- tech blogging,
- neural networks,
- image processing,
- mnemonics.

## Personal statement

I'm an Android enthusiast who loves to work with people. I provide a full spectrum of services - from architecting and developing the hardest parts of code, to teach-ing, coaching and mentoring my subordinates. I believe that good code has four inseparable qualities: it works as expected, it's easy readable, it's fully tested, and is easy expandable. I strongly believe in SCRUM methodology, and often take the role of the SCRUM master of the team. I encourage my developers to use technolo-gies they find interesting, making sure they still find their work fun and challenging. I do my best to find a balance between step-by-step guiding and controlling junior developers and giving a free choice for more advanced ones.
