Languages

English	Highly proficient (runs English-speaking team),
Polish	Native speaker.

Personal statement

I am a tech enthusiast who loves to work with people. I provide a full spectrum of services – from managing, coaching and mentoring my team to architecting and developing the most challenging parts of code. I strongly believe in SCRUM methodology. I always encourage my team to use technologies they deem interesting, making sure they still find their work fun and challenging. I do my best to find a balance between step-by-step guiding junior developers and giving more freedom to advanced individuals. As a manager, I believe that a happy developer is a productive developer. As a developer, I believe that a good code has four inseparable qualities: it works as expected, it is easily readable, it is fully tested and it is easily expandable.
