Interests

- · mobile architecture,
- · leading, coaching & mentoring techniques,
- libraries development,
- · tech blogging,
- · neural networks,
- · image processing.

[Personal statement]

I am an Android OS enthusiast who loves to work with people. I provide a full spectrum of services - from architecting and developing the most challenging parts of code, to teaching, coaching and mentoring my team as well as helping out my colleagues. As a developer, I believe that a good code has four inseparable qualities: it works as expected, it is easily readable, it is fully tested and it is easily expandable. I strongly believe in SCRUM methodology and often take the role of the SCRUM master of the team. I always encourage my team to use technologies they deem interesting, making sure they still find their work fun and challenging. I do my best to find a balance between step-by-step guiding and supervising junior developers and giving more freedom to advanced individuals.
